

### **Amendments to the Specification**

**Page 8, between lines 3 and 4: Please insert the following paragraph:**

As shown in Fig. 1, non-divisional electrode 1a and divisional electrode 2a both included in deposited electrodes 110 have substantially the same thickness, and non-divisional electrode 1b and divisional electrode 2ba both included in deposited electrodes 210 have substantially the same thickness.

**Please replace the paragraph beginning at page 14, line 2, with the following rewritten paragraph:**

The foregoing structure allows achieving an advantage and an effect similar to those obtained in the first embodiment, and yet, two unit-capacitors are coupled together in series similar to the fourth embodiment, and further, heat generation from lattice-like divisional electrodes ~~32b~~32a can be suppressed. As a result, a metallized-film capacitor working in a higher voltage environment and generating less heat is obtainable.
